CCS Provenance Anchor: correctover-scan — code snapshot existence and timestamp evidence

Guigui Wang¹

Show affiliations

CCS Provenance Anchor — evidence of existence and timestamp for a specific code snapshot. This record contains the content-addressed manifest (per-file SHA-256 hashes, JCS/RFC 8785 canonicalization) and the signed identity receipt for the snapshot.

The manifest digest

b0366186a5063a091148ffdc6b042d36e8cfa8e2d675e05b6c598e096b3ca75f is anchored in the public Sigstore Rekor transparency log (hashedrekord entry), which provides an independently observable, append-only timestamp. The Rekor entry and this DOI cross-reference each other:

- Rekor entry (search UI): <https://search.sigstore.dev/?logIndex=2694324795>
- Rekor entry (API):
<https://rekor.sigstore.dev/api/v1/log/entries/108e9186e8c5677a73f6da1e2fbd15e5fd2b5dcfa7a5cbac9f96d844762f6cb7f316adf210d45a53>

Snapshot: **correctover-scan**. Signer: Guigui Wang (wangguigui@correctover.com), Correctover.

Files: **manifest.json** (content-addressed file list), **receipt.json** (Ed25519-signed identity receipt, RFC 8032), **anchor-record.json** (Rekor UUID / log
